

Using Tutorial on PC of Opswap Test Network

How do I connect my wallet?

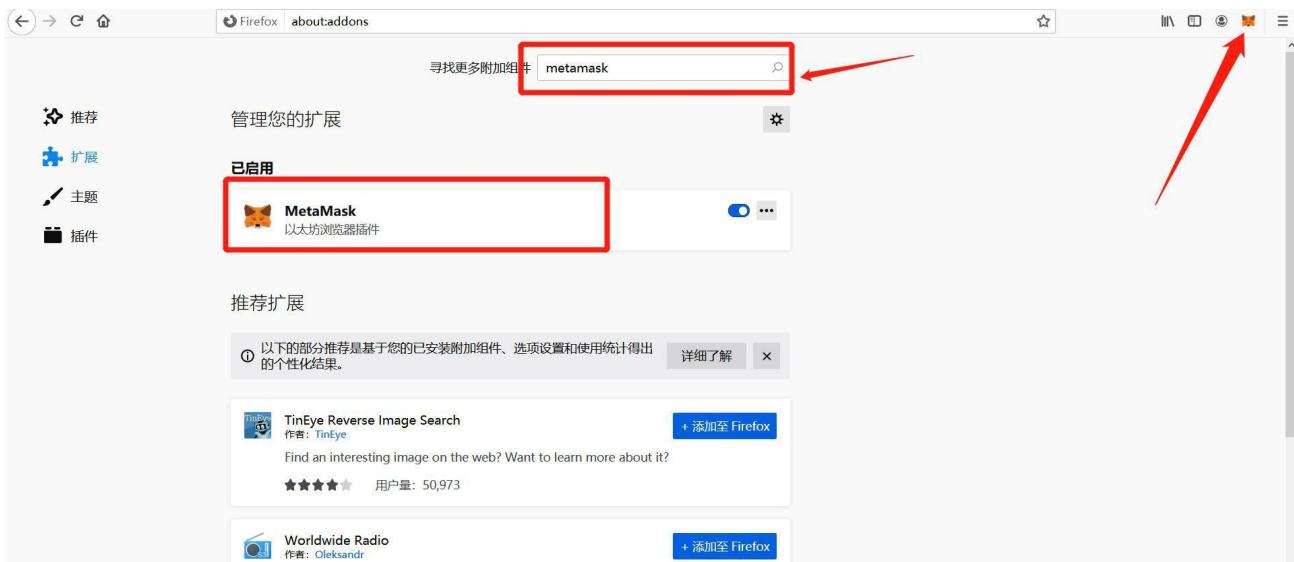

Currently, the Opswap test network version only supports MetaMask wallet, please set up a connection to MetaMask download address: <https://metamask.io> after you download MetaMask wallet

Recommend using the Firefox browser download address on PC: <http://www.firefox.com.cn>

1. Use Firefox browser to download the MetaMask wallet plug-in, open the Firefox browser's top right-hand corner three horizontal buttons, and after finding additional components as shown below, click on the direct search metamask to install.

Once installed, a small fox icon will appear in the upper right corner, click the little fox three times so that it can call the metamask plug-in.

Import a wallet mnemonic or create a new wallet so as to enter the wallet.

第一次使用 MetaMask ?

不，我已经有一个账户助记词了。
使用 12 个单词的账户助记词导入您现有的钱包账户。

导入钱包

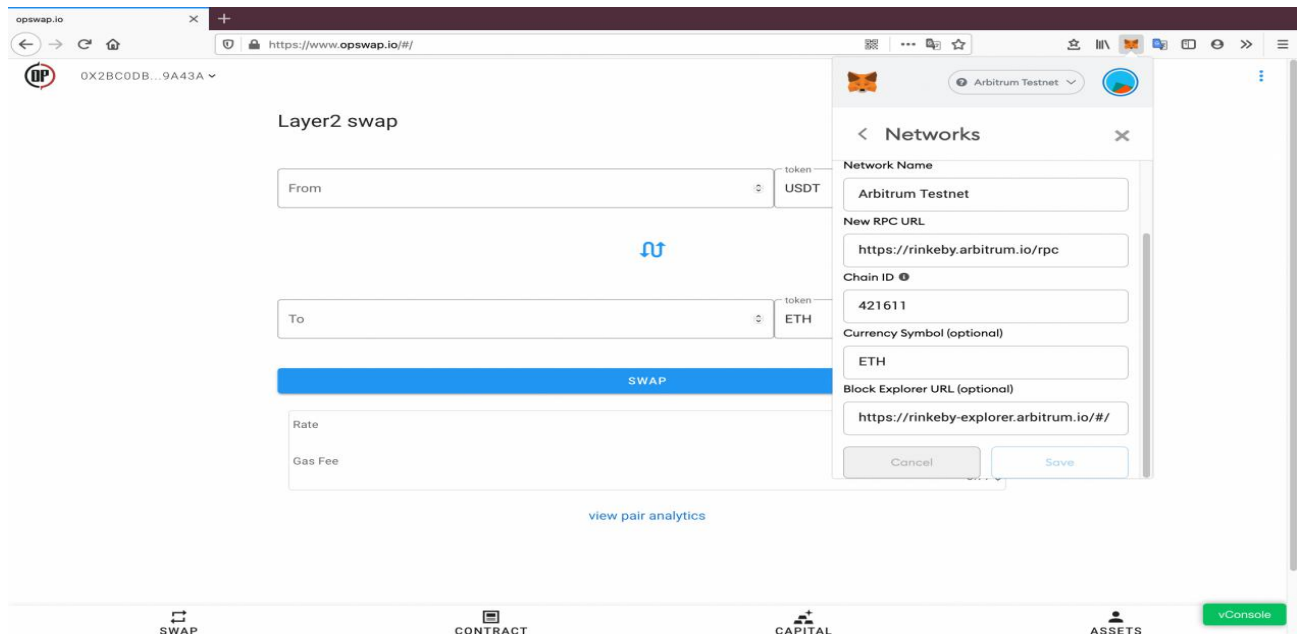

第一次，立即开始设置！
将为您创建新的钱包账户和账户助记词。

创建钱包

2. Log in official website: opswap.io double click MetaMask's wallet in the upper right corner, so as to switch to the Ethernet arbitrum test network from the main network.

You need to customize RPC by this time

Customize PRC data for

网络名称: Arbitrum Testnet

Network Nome: Arbitrum Testnet

New RPC URL: <https://rinkeby.arbitrum.io/rpc>

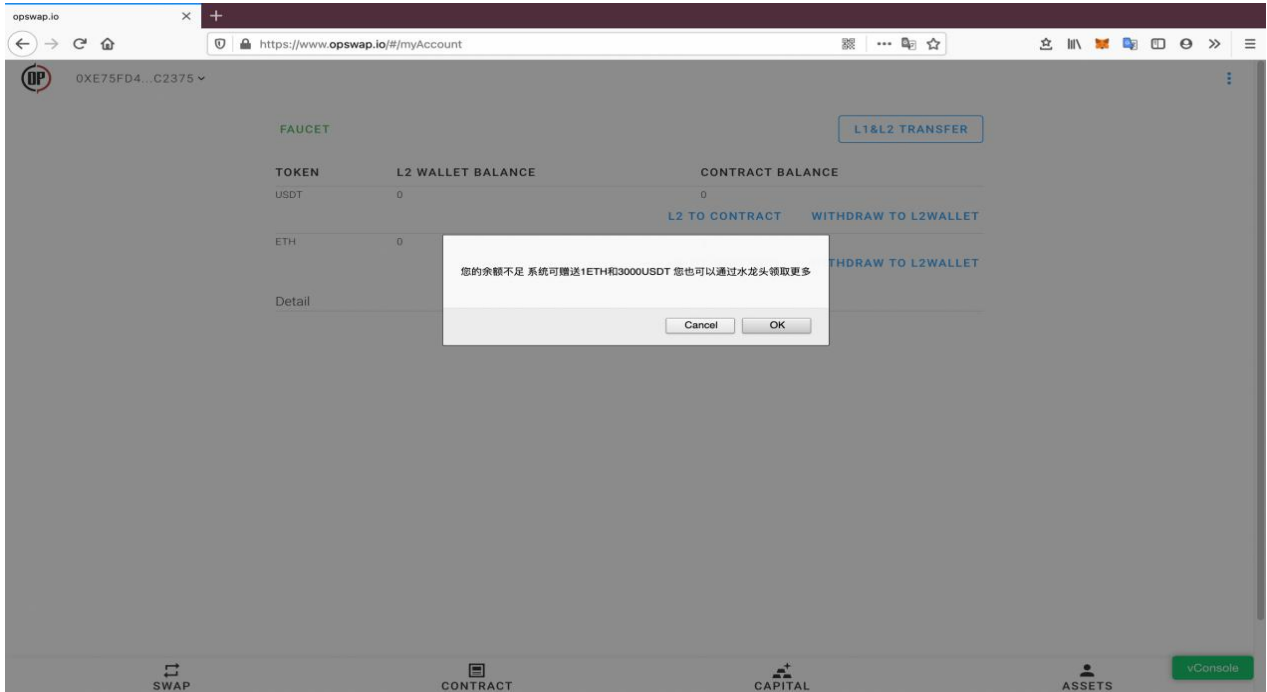

Chain ID: 421611

Currency Symbol (optional): ETH

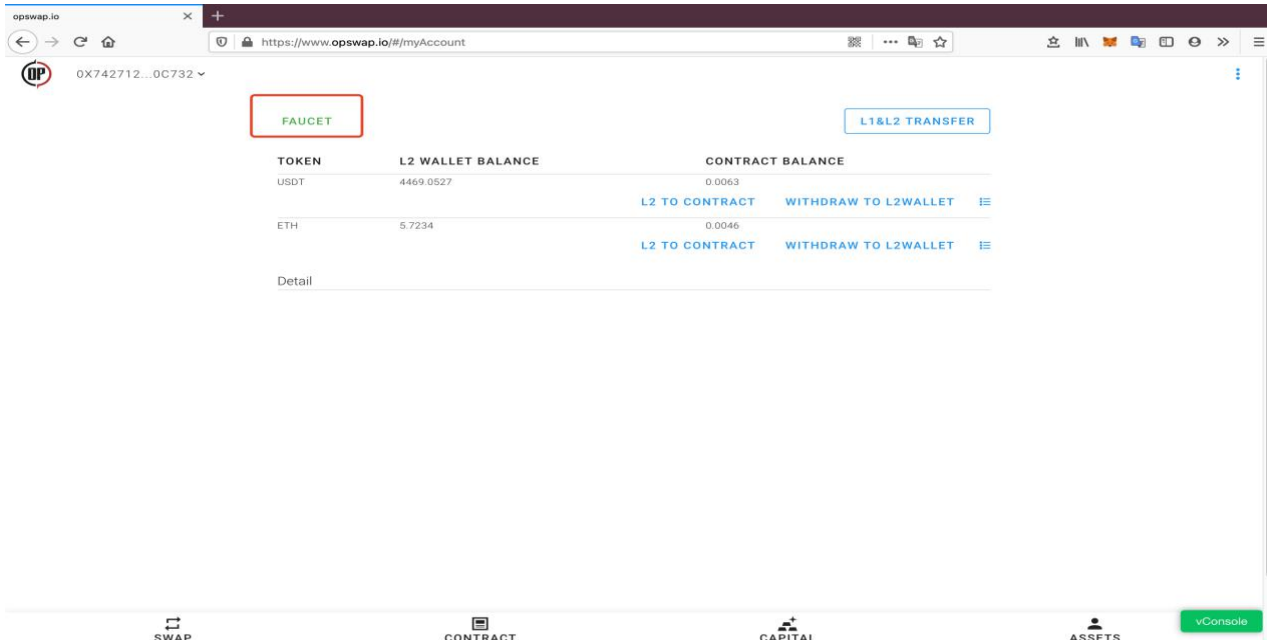

Block Explorer URL (optional): <https://rinkeby-explorer.arbitrum.io/#/>

How to get arbitrum network test currency?

1. Log in opswap.io
2. The MetaMask wallet address for connection will be automatically prompted. After the link is successful, click "Asset" and automatically remind you that your balance is insufficient. The system can add extra test coins, and click "OK" to test currency will be paid to your wallet account automatically.

3. The second method is that you can obtain test currency through a faucet. A wallet address can only receive 1 ETH and 3000 test coins within 24 hours.

After receiving the test currency, users can check their balance in the asset interface, switch to English and Chinese after clicking the upper right corner of any interface three times, and you can check the official community, code submission, forum and other information.

The screenshot shows the opswap.io website interface. The browser address bar displays <https://www.opswap.io/#/myAccount>. The user's account ID is 0X742712...0C732. The main content area features a 'FAUCET' section with a table of balances and a 'L1&L2 TRANSFER' button.

TOKEN	L2 WALLET BALANCE	CONTRACT BALANCE
USDT	4469.0527	0.0063
ETH	5.7234	0.0046

Below the table, there are links for 'L2 TO CONTRACT' and 'WITHDRAW TO L2WALLET'. A red box highlights the table and the 'L2 TO CONTRACT' links. A red arrow points to the language dropdown menu in the top right corner, which is currently set to '中文' (Chinese). The dropdown menu includes options for 'Docs', 'Github', 'WhitePaper', 'BUG Bounty', 'Community', 'Forum', and 'Faucet'. The bottom navigation bar contains icons for 'SWAP', 'CONTRACT', 'CAPITAL', 'ASSETS', and a 'vConsole' button.

How to exchange for swap spot transaction?

Pull down the arrow on the right to choose the sorts of currency you want to sell, Pull down arrow below to select the currency you want to buy, input the amount you want to change into the white box, and click the blue button so that you can exchange for the swap on sorts of currency.

How to add liquidity of spot goods?

Pull down the arrow inside the picture to choose the currency that you want to add, input the amount that you want to add inside white box, add the amount of liquidity with need of two assets value being 50% each amount, the amount that is input will calculate the amount needed automatically, and click blue button so as add liquidity.

The screenshot displays the 'Add Liquidity' page on the opswap.io website. At the top, there's a header with the opswap.io logo and a wallet address '0X742712...0C732'. Below the header, a 'CONTRACT LIQUIDITY' button is visible. The main section is titled 'Add Liquidity' and shows the current pool state: 'Liquidity USD: 133626.5804' and 'ETH: 35.6206'. A balance of '4469.0527' is also shown. There are two input fields: the first is for 'USD' with a balance of '4469.0527', and the second is for 'ETH' with a balance of '5.7234'. A blue double-headed arrow is positioned between the two input fields. Below the input fields is a large blue button labeled 'ADD LIQUIDITY'. A note below the button states: 'By adding liquidity you'll earn 0.3% of all trades on this pair proportional to your share of the pool. Fees are added to the pool, accrue in real time and can be claimed by withdrawing your liquidity.' A link 'view pair analytics' is provided. The footer contains navigation links: 'SWAP', 'CONTRACT', 'CAPITAL', 'ASSETS', and a 'vConsole' button.

How to add contractual liquidity?

Click contract liquidity on the upper left corner, click the drop-down arrow following steps below to choose the currency you want to add, input the amount of money you want to add into the lower white box, click the blue button to add the liquidity of contract deposits

The image shows two screenshots of the opswap.io website interface.

How to transact a contract?

First, we need to find a charging button in the asset interface. We need to charge the deposit assets first to the contract before we can make contract short transactions.

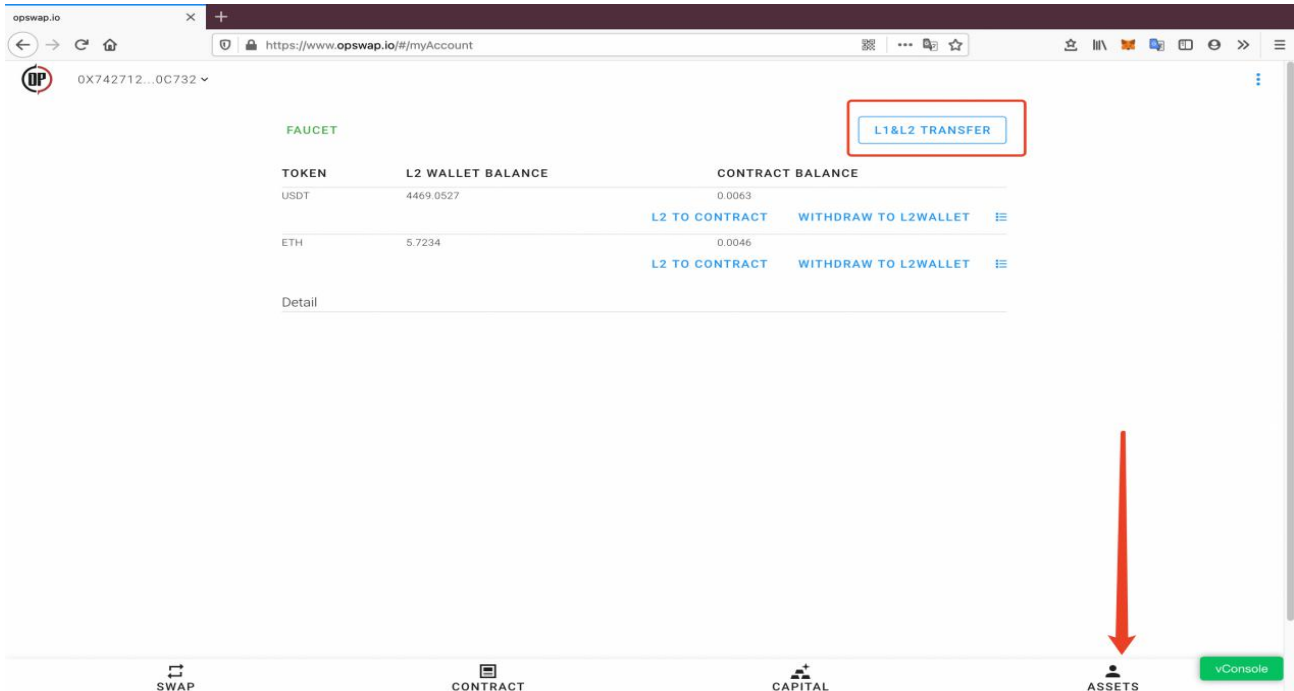

Click the drop-down arrow to select a trading pair, input the amount of money you want to trade into the white box so that you can trade a contract, up to 10 times to support leveraged financing transactions at most.

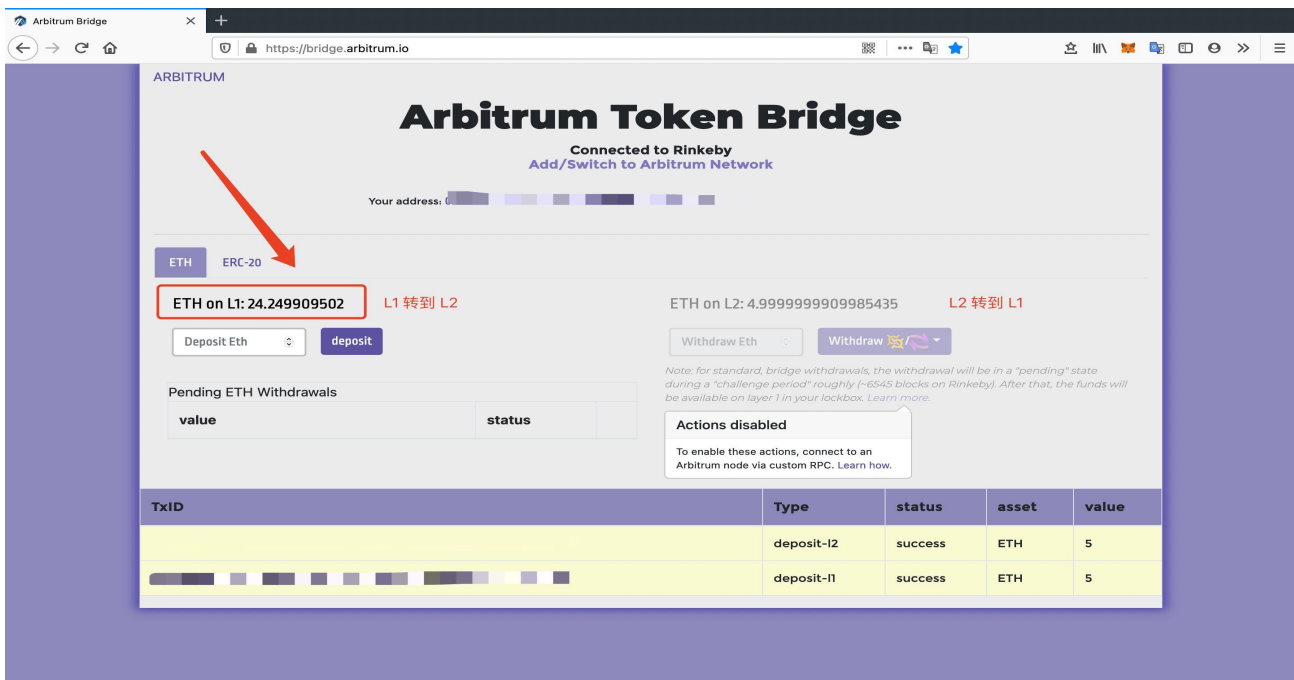

How to transfer one layer of assets to the arbitrum two-layer network?

Open the opswap.io and select the Rinkeby network. Click the button of the asset selection above to transfer money on one layer or two layers.

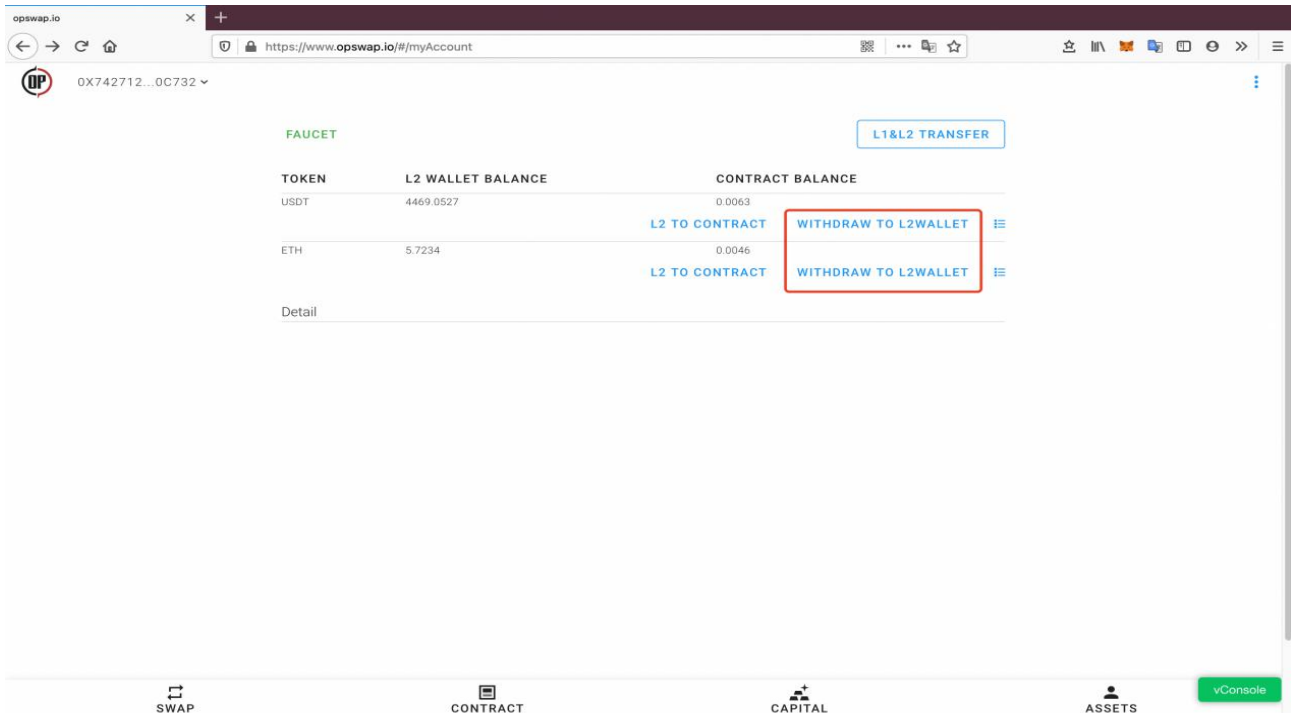

Rinkeby test coin in the red box that your own, as you can see, is an L1 asset. (Note: the black font in the red box on the left represents L1 assets, and the gray font on the right represents L2 assets.) Input the amount to be transferred into the white box, and click the button so that you can charge to the arbitrum network.

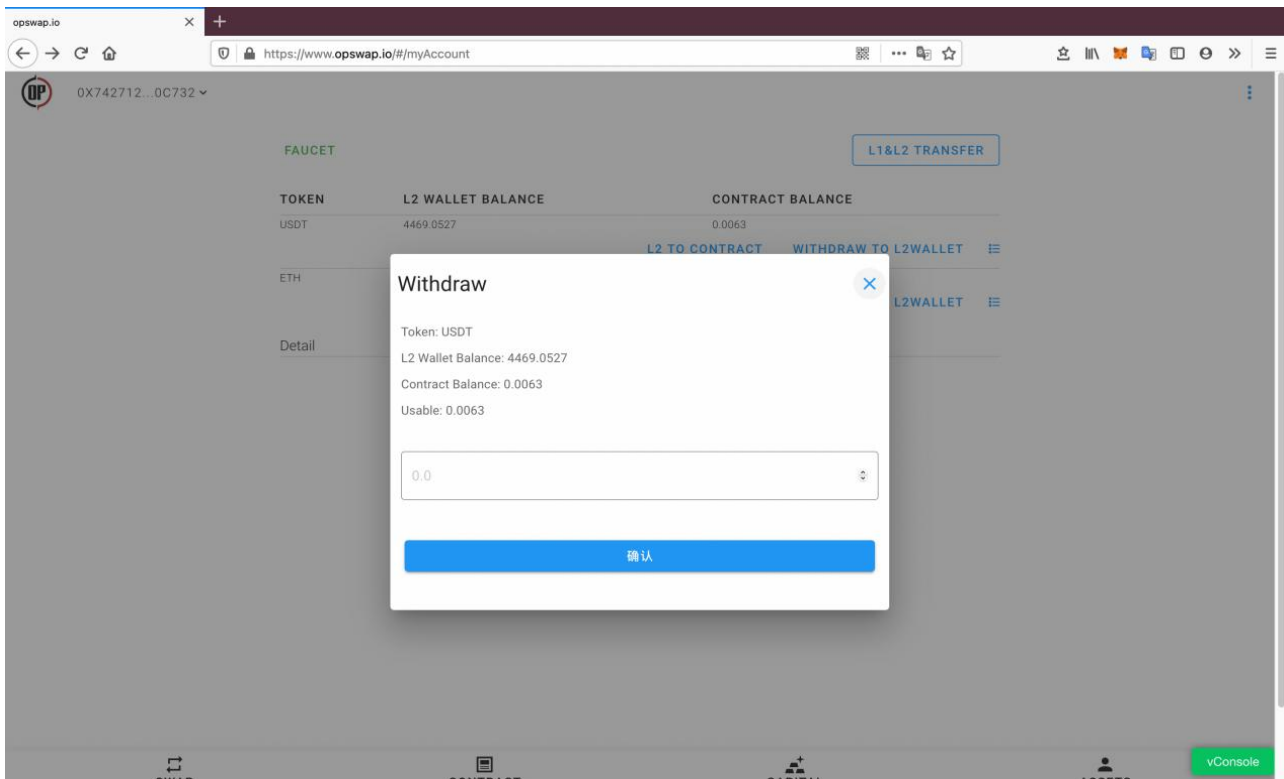

Switch the official website to the arbitrum network settings so that you can look at the two-tier network assets,

How to extract contract assets to L1?

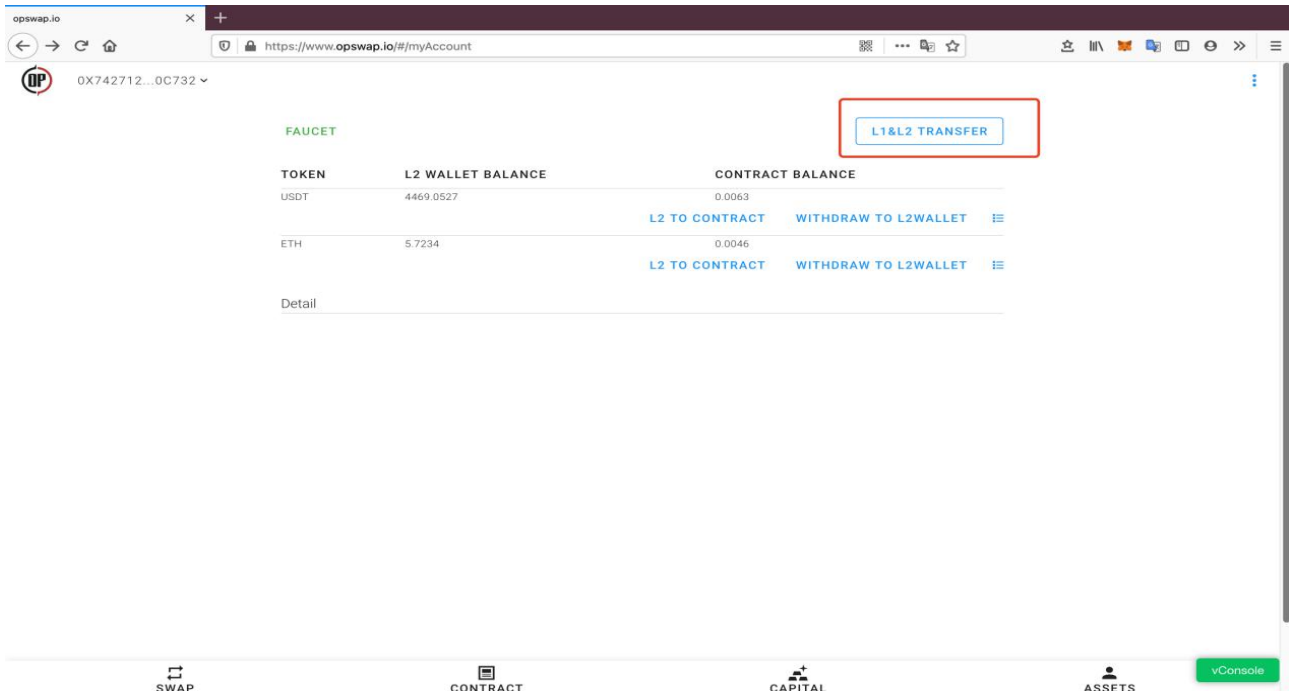

Find my asset interface and click L2 Wallet button to withdraw deposit.

Input the number of currency you want to withdraw from your contract into your L2 wallet. Click OK and the currency will get to your L2 wallet immediately.

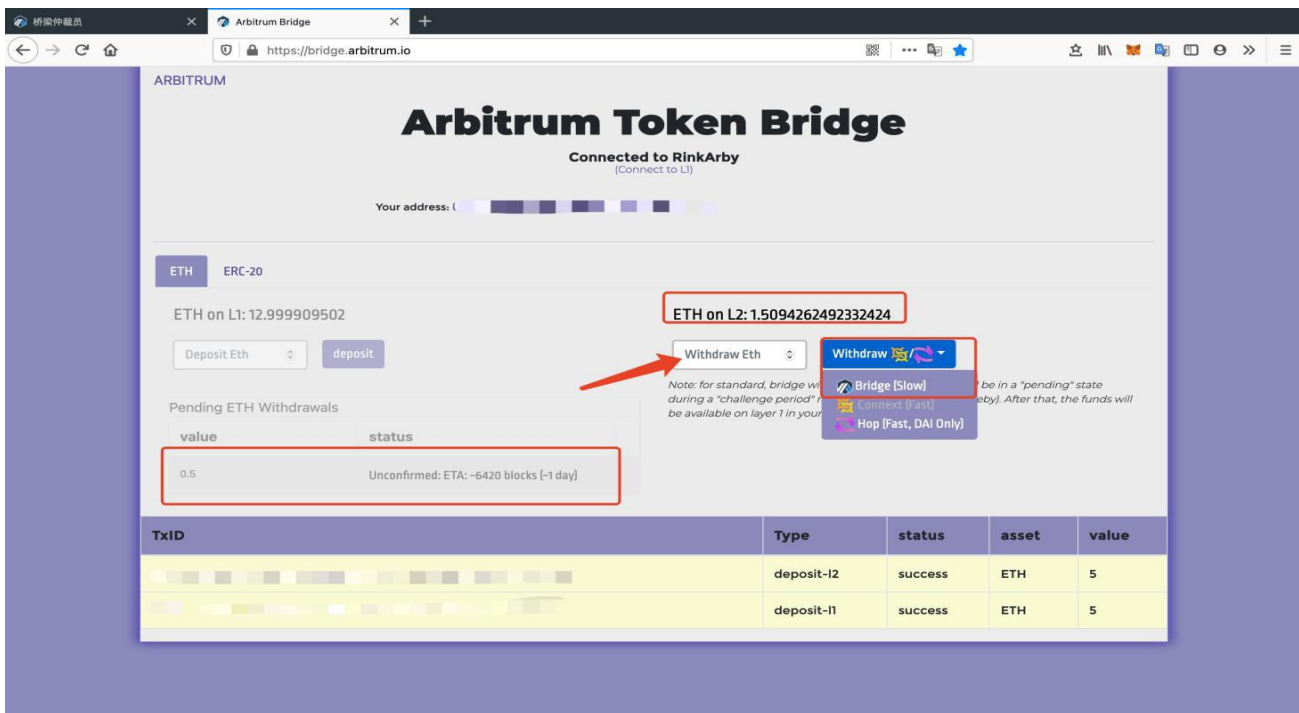

Click one layer and two layers to rotate each other

Input the amount of L1 you want to withdraw into the white box of the red arrow below. (Note: The gray asset on the left represents the L1 asset, black asset on the right

represents L2 asset), click the blue button [Bridge (flow)] to slow mode, currently, arbitrun network fast mode only supports dai, L2 exchanging to L1 only supports eth and dai, and red box shows the details of the transfer and account information, the yellow box on the bottom is for the past transaction record of past transaction

Common problem:

What determines the price?

The current token price depends on the relative amount of tokens in per pool of funds. Through the Automatic Marketer System (AMM), smart contracts always follow the constant formula: $x*y=k$, where $x=\text{token1}$, $y=\text{token2}$, $k=\text{constants}$. It will automatically delete the amount of one token and increase the number of other tokens according to the constant formula after realizing each transaction. During this period, the constant k remains constant and the balance is updated in real time. Therefore, each transaction will adjust the amount of tokens balance, thus changing the price.

What tokens can you exchange for?

Currently, Opswap supports USDT and ETH tests on the test network

Do you need a commission for the Opswap?

The system will automatically charge 0.3% fee for each conversion operation, which will be used to reward liquidity providers in the fund pool.
